

Project/Assignment Decisions

For this sidequest task, in class I immediately thought to make the blob red and agitated whenever it was restricted from its movement. My process took multiple attempts as at the start ChatGPT did not know what exactly I wanted from it.

GenAI Documentation

Date Used:

Tuesday Jan 27 2026

Tool Disclosure:

ChatGPT (un-upgraded)

Purpose of Use:

I used ChatGPT to help me give the blob an emotion that can be visually seen when bumping into walls and being unable to move.

Summary of Interaction

ChatGPT helped me to give the blob emotion in two ways, color and erratic movement. Since I did not know how to make the changes myself, I asked ChatGPT to do it all for me with some guidance.

Human Decision Point(s)

After receiving my first generated code, I went in and tested it and found out that it didn't even change a thing. That's when I gave ChatGPT further instructions and to help me complete the code once again. I also asked chatgpt to reassemble the code because it would give me it in parts and I did not know where to place it.

Integrity & Verification Note

I ensured that the rest of the code stayed the exact same outside of the changes made. I last did cs 105 in first year and am only currently working on 106 right now, I am completely rusty and still in learning. In class I asked for clarification on how we can use AI and our prof said that as long as I go back and forth with AI a few times I can ask it to write the code for me.

Scope of GenAI Use

ChatGPT was responsible for the changes made to the code. Whereas I was not able to do any of it. I was there to guide ChatGPT and help it make changes when I knew what it produced was wrong. ChatGPT technically can't visually see its changes so I made sure to explain it right when ChatGPT made mistakes.

Limitations or Misfires

ChatGPT kept trying to completely rewrite the comments. I did not want to change anything except for the areas I asked ChatGPT to add extra code in, so I went back and told ChatGPT to bring back the comments it removed and to delete the new ones it added.

Summary of Process (Human + Tool)

I began with asking ChatGPT to just make some changes based on what I wanted (red and more jittery). I then went back and forth with ChatGPT like 4 or 5 times. Just asking it to make the changes for me since I didn't know how to. When it would give me the wrong output I would ask it again. Lastly, I made sure to read the code and make sure that ChatGPT was not making any other significant changes to it just to make my requests work.
