

Project/Assignment Decisions

For this sidequest task, in class I immediately thought to make the blob red and agitated whenever it was restricted from its movement. My process took multiple attempts as at the start chatgpt did not know what exactly I wanted from it.

GenAI Documentation

Everyone must complete this section. If not GenAI was used, write, “No

Date Used:

Tuesday Jan 27 2026

Tool Disclosure

ChatGPT

Purpose of Use:

Coding

Summary of Interaction

ChatGPT helped me to give the blob emotion in two ways, color and erratic movement.

Human Decision Point(s)

After receiving my first generated code, I went in and tested it and found out that it didn't even change a thing. That's when I gave chatgpt further instructions and to help me complete the code once again. I also asked chatgpt to reassemble the code because it would give me it in parts and I did not know where to place it.

Integrity & Verification Note

I ensured that the rest of the code stayed the exact same outside of the changes made.

Scope of GenAI Use

Chatgpt was responsible for the changes made to the code.

Limitations or Misfires

Chatgpt kept trying to completely rewrite the comments.

Summary of Process (Human + Tool)

Went back and forth with AI like 4 or 5 times. Just asking it to make the changes for me since I didn't know how to. When it would give me the wrong output I would ask it again.
